

SysReforms International Environmental Sustainability Policy

Introduction

SysReforms International is dedicated to preserving the environment and ensuring its sustainability for future generations. As a company having a diverse portfolio of health, innovation, and technology, we recognize the impact that our operations and products can have on the environment and are committed to implementing sustainable practices to reduce this impact. This policy outlines our commitment to environmental sustainability and the steps we are taking to align with the United Nations Sustainable Development Goals (SDGs).

Mission & Vision

Our mission is to improve health, reduce poverty, improve the availability of essential health commodities, reduce disparities, strengthen economies, and create a sustainable economy. We are a company with a diverse portfolio that includes data analytics, health supply chain, and other areas related to health, innovation, and technology. We believe that sustainability is an essential element of our mission.

Current Initiatives

SysReforms International is leveraging technology for improving our environment. We are producing innovative solutions to reduce carbon emissions. We are cognizant of the challenges related to climate change faced by the world today and specifically by Pakistan. We encourage our employees to use energy efficient measures in their project management approaches.

SysReforms is working on the important area of "one health". One health is a holistic approach to health that recognizes the interconnections between human, animal, and environmental health, and aims to improve health outcomes for all by addressing these interconnections.

Developing software solutions in this area can have a significant impact, as technology can be used to facilitate information sharing, data analysis, and decision-making in ways that were not possible in the past. For example, software solutions could be used to track the spread of diseases that affect both humans and animals, or to monitor environmental conditions that impact health.

Environmental Sustainability

Objectives

1. To reduce the environmental impact of our operations and products through continuous improvement.
2. To promote sustainable practices throughout our supply chain.
3. To educate our employees, customers, and stakeholders about the importance of environmental sustainability.
4. To comply with all applicable environmental regulations and laws.
5. To integrate environmental sustainability into our business strategy and decision-making process.

Implementation

As a conglomerate company, SysReforms is committed to play a significant role in promoting environmental protection and conservation through several ways:

1. **Energy Efficiency:** Implement measures to improve energy efficiency in its data centers and offices, such as using energy-efficient equipment and infrastructure, optimizing cooling systems, and using virtualization technology to reduce the number of physical servers.
2. Reduce greenhouse gas emissions and minimize the company's carbon footprint through monitoring of energy consumption and emissions
3. **Green technology solutions:** SysReforms is dedicated to designing and deploying green technology solutions to assist firms in decreasing their ecological impact, limiting waste, and preserving natural resources. Among its offerings are energy management, waste reduction, and water conservation software applications. The company has also developed a carpooling software application that has the potential to positively impact the economy, reduce poverty, and enhance overall well-being.
4. Promote sustainable resource use and waste reduction by reducing, reusing, and recycling materials in day-to-day operations.
5. **Renewable energy use:** We are committed to sourcing renewable energy to meet our energy needs and reduce greenhouse gas emissions. As part of our commitment, we will install renewable energy systems, such as solar panels, wind turbines, and hydro power systems, in our own buildings and encourage our clients to adopt renewable energy sources in the solutions we offer.
6. **Eco-friendly practices:** SysReforms is committed to sustainability by reducing paper use, promoting remote work, and using eco-friendly products. With EMRO countries, SysReforms is establishing a paperless environment and improving digitization to decrease its carbon footprint. SysReforms is also assisting WHO EMRO countries to digitize processes, increasing efficiency and reducing environmental impact.
7. **Biodiversity conservation:** SysReforms aims to create and provide technology solutions that advance biodiversity conservation efforts. This includes developing software applications that monitor and track endangered species, safeguard their habitats, and encourage sustainable development practices.
8. Raise awareness of the importance of sustainability among our employees, customers, and communities.
9. **Employee Education and Engagement:** Educate employees about the importance of sustainability and engage them in initiatives to reduce the carbon footprint of the organization.
10. **Geared towards Finding Partners, Donors, and Collaborators for Improving the Environment:** We will work with partner donors/collaborators to find like-minded organizations and individuals including clients and government who share our commitment to environmental sustainability. Together, we can achieve more significant impact and create a sustainable future.
11. **Climate Change:** To tackle climate change, we will gauge, disclose, and curtail our greenhouse gas emissions. Furthermore, we will foster the growth of renewable energy and promote schemes that aim to diminish carbon emissions.

12. Sustainable Development Goals (SDGs): We will align our environmental sustainability policy with the United Nations Sustainable Development Goals (SDGs). In particular, we will focus on SDG 7 (Affordable and Clean Energy), SDG 12 (Responsible Consumption and Production), SDG 13 (Climate Action), SDG 14 (Life below Water), and SDG 15 (Life on Land).

This policy will be reviewed and updated on an annual basis to ensure that we are continuously improving our environmental sustainability practices.

Conclusion

SysReforms International is committed to leading by example and demonstrating that it is possible for companies to operate in a manner that is both economically and environmentally sustainable. By implementing this policy, we aim to reduce our environmental impact, support the United Nations Sustainable Development Goals, and promote sustainable practices in the organizations.
